

## Where We Serve

Uasin Gishu, Trans Nzoia, West Pokot and Elgeyo Marakwet Counties

## Focus Area

PrEP is a HIV prevention means offered to clients at high-risk of acquiring HIV. HIV risk is determined through the use of Rapid Assessment Tool. Eligible clients are tested for HIV to determine their baseline results. For PrEP to be effective, adherence to drugs is very important and therefore client's willingness to take PrEP is required. Clients can access PrEP from both health facility and community settings. In addition to providing PrEP to clients visiting health facilities, there is need to reach those at risk of HIV in the community and rarely visit health facilities.

PrEP achievement trend.

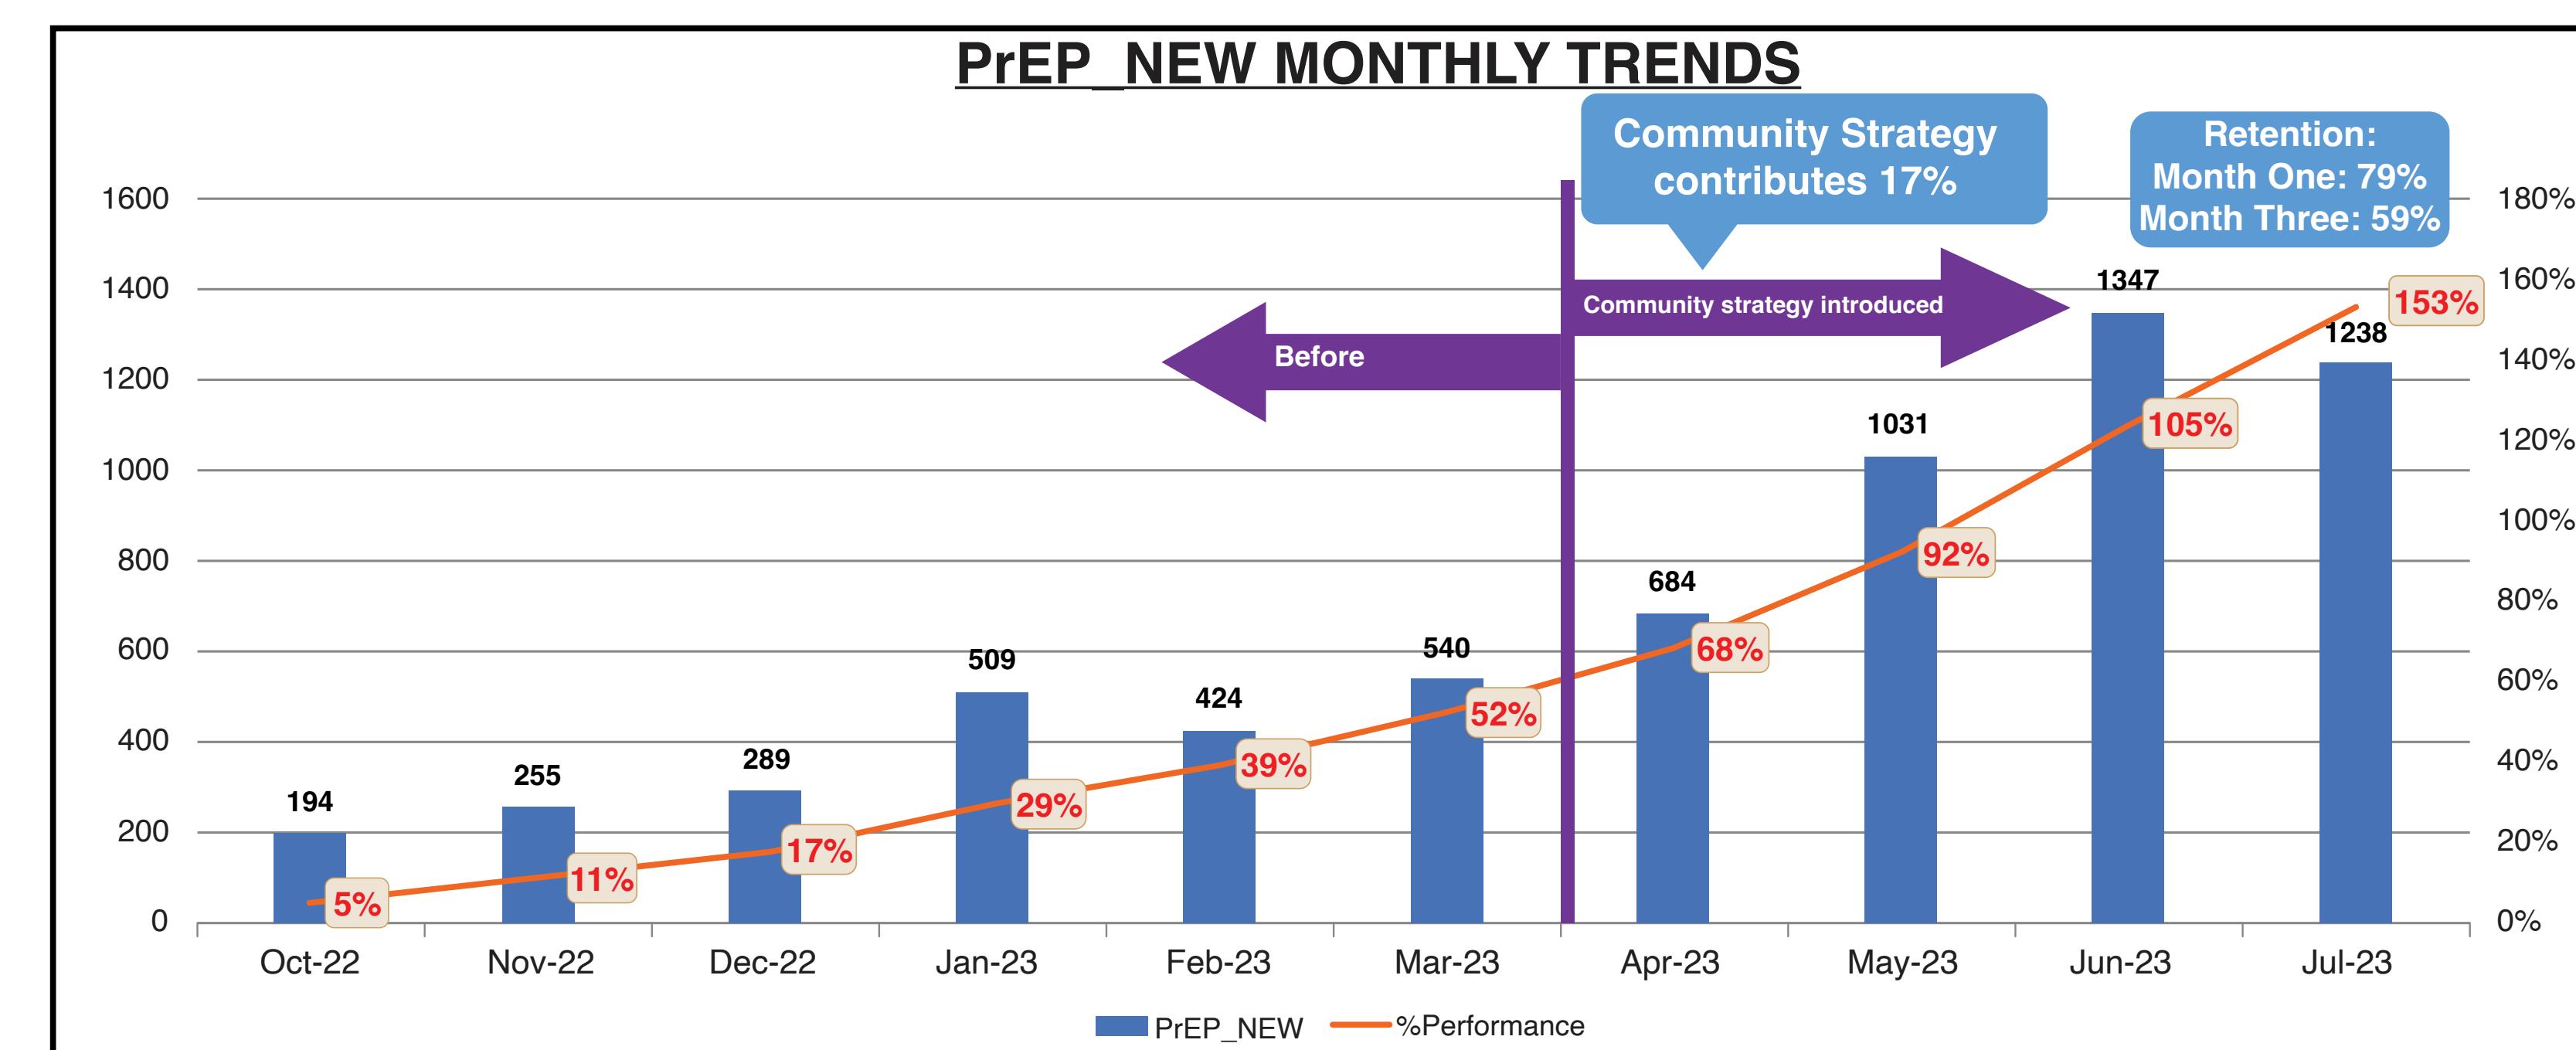

## Increasing Pre-Exposure Prophylaxis (PrEP) Uptake in USAID AMPATH Uzima-Supported Counties

### EXHIBITORS

**DAVID MUTINDA**  
Prevention Technical Advisor

### KEY COLLABORATORS

COUNTY HTS OFFICERS  
FACILITY STAFF  
COUNTY MINISTRY OF HEALTH (MOH) TEAM

Increase in PrEP uptake.

### KEY OBJECTIVE

To increase PrEP uptake among all populations, provide prevention through PrEP for targeted populations (men and young people) and provide PrEP services to clients at their convenience.

### KEY ACHIEVEMENTS

In FY23, the program reached 8,957 new clients with PrEP services against allocated USAID targets of 4,263. This was 210% target achievement. Among the served clients, 4,873 (54%) were men while 652 clients were reached in the community.

## Vision for the Future

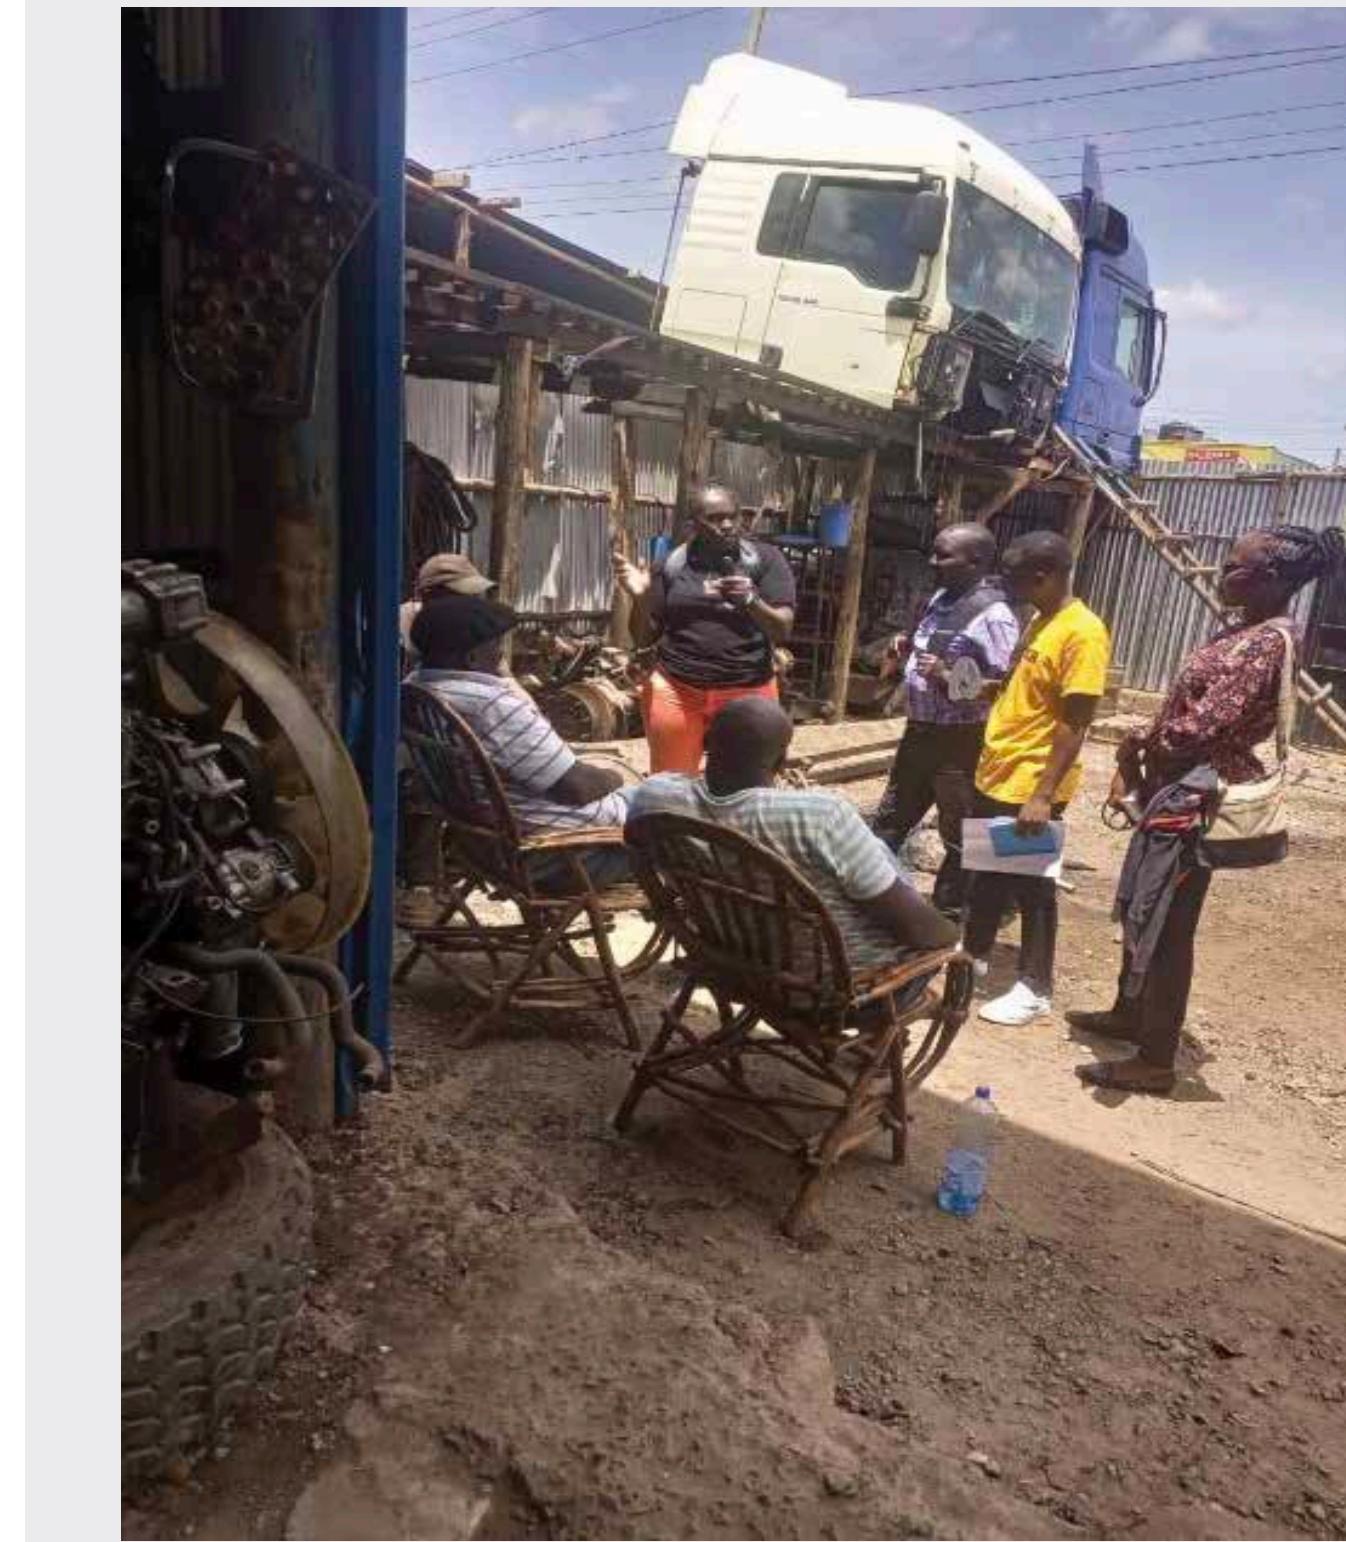

The program will scale up this initiative further to provide refills in the community through collaborating with local chemists as well as leverage existing Differentiated Service Delivery (DSD) Anti-Retroviral Therapy (ART) models.

## Challenges

Reaching clients with PrEP refill for continuation is not easy especially those not able to visit health facilities. There is need to custom make models that suit all clients.
